Cantennator Crack+ Free Latest

A lightweight utility to calculate the optimal cantenna length to improve your Wi-Fi range, or adjust the desired distance between the antenna and the device (e.g. iphone or dongle) to achieve perfect reception. Dimensions are displayed in millimetres only, but could also be converted to the other unit of measurement (inches, centimeters, etc.). The application is designed to simplify calculations and calculations, but from an experienced point of view, it could be improved in the future. Main features: * : Autorun (if this feature is not enabled, you can use the "Start" option to start the process and use it immediately). * : Works in Windows 7/8 and 8.1/10 * : Works on any version of Windows starting from Windows XP. * : Different configuration settings available. * : You can change the desired distance between the antenna and the device (iPhone/tablet, Wi-Fi DONGLE, etc.) * : Graphical representation of cantenna parameters: length, diameter, and volume. * : Spontaneous discovery of wireless networks. * : Automatic measurements (distance, SSID, MAC addresses, etc.). * : Optimizes measurements in millimetres only (support for other units would be available too). * : Percentage values of area gains, noise reductions. * : Auto calculation of the optimal cantenna length (displayed in millimetres only). * : Useful information is stored in the desktop.ini file for future use. * : Built-in converter from (feet, meters, etc.) to millimetres. * : WPA2 protected networks. * : A convenient and user-friendly interface. * : Runs quickly (compares with other similar tools). * : The application comes in handy when you need to build a cantenna for boosting the Wi-Fi signal, decrease noise, or reduce interference by placing your phone or other RF devices (e.g. wireless security cameras) next to the antenna. * : You can measure the distance between the antenna and the device to get the optimal position. * : You can increase the antenna height by placing the wire next to the wall or positioning the wire in the other location to amplify the Wi-Fi signal. * : However, you should avoid placing the can near the window, as the metal frame (window frame, etc.) will probably reduce the signal.

Cantennator Activation Code is a lightweight program that helps you calculate the optimal length of the cantenna for increasing or decreasing cell phone ranges. For this, the tool calculates the cantenna thickness that will provide the right balance between the performance and the cost of the device. The diameter of the cantenna is set by the user, while the connector distance is automatically set based on what antenna provides the lowest error. SofarSpike is a free Wi-Fi repeater application that makes it possible to connect an Ethernet or Wi-Fi network to a 3G mobile network. The program has been created in order to provide users with the ability to make free Wi-Fi hotspots available in their homes. Moreover, the application allows you to reach the 3G network using one's smartphone/tablet or other Wi-Fi devices. SofarSpike can be used by individuals and families who are looking to setup a hotspot in their homes. Apart from hotspot access, the tool can be used for sharing the home internet connection with other Wi-Fi devices. The program enables users to connect devices to the 3G network and enables a quick and easy setup that does not require advanced knowledge about the subject. SofarSpike provides easy access to a 3G-enabled hotspot for the users' mobile devices. Apart from Wi-Fi repeaters, the application features other useful features, such as the possibility to add manual DNS entries or perform internet traffic redirections. SofarSpike Description: SofarSpike is a portable software application that helps users set up their own 3G connection hotspot that works by using a USB stick or SD card. The program enables one to easily connect a network to which one's mobile devices can connect. The software's ease of use enables its users to set up the connections. The tool also acts as a portable Wi-Fi access point that connects with the internet via a PC. CombxSoft is a cross-platform multi-cast streaming server for Linux, macOS, and Windows. New features Cantenna calculator calculates cantenna diameter and maximum distances Shows graphical representation of cantenna parameters Optimal cantenna dimensions are specified in cm and m User-friendly interface with no configuration settings Cantenna Calculator Cantennator is a lightweight Windows program built specifically for helping users calculate the ideal dimensions for cantennas, which are usually used for improving the range of Wi-Fi networks. The tool boasts a clean and simple layout that offers only a few configuration settings to tinker with. Cantennator gives users the possibility to specify the can diameter and with just one click on the "Calculate" button, the application provides useful data about the ideal can length and calculates the distance where you can drill the hole for the connector. By default, the application performs the calculations in millimetres, so you cannot pick the measurement unit. What's more, the utility lets you view a graphical representation of the cantenna parameters and other useful data that could help you calculate an optimal cantenna length. Since there aren't any configuration settings, even rookies can set up the entire operation with minimum effort. However, advanced users may find pretty inconvenient to work with a program that doesn't come packed with advanced features. On the downside, it hasn't been updated for a while, so it may cause compatibility issues on newer operating systems. To sum things up, Cantennator makes the entire process seem nothing but a piece of cake. This small calculator seems to be the right choice for users who are looking for an easy-to-use tool without any configuration settings. It comes in handy in case you intend to build a cantenna for boosting your Wi-Fi signal, increase cell phone range, decrease noise, or use it with other RF devices (e.g. wireless security cameras). System Requirements For Cantennator:

Mac Windows SteamOS Our tests were conducted on a 2014 MacBook Pro running OS X 10.11.5 and on a 2009 iMac running Windows 7. Both computers were equipped with a NVIDIA GeForce GTX 650 and a 2.5 GHz Intel Core i5-2540M processor. Since we are going to use a GeForce GTX 650 in order to be able to push out up to 120 frames per second (FPS), there is really no need to bother with the most recent generation of CPUs.
