ChequeGuru enables you to write cheques that are accepted and settled by companies and organisations all across the world. Smartphones with 4.7 inches or larger screens have become increasingly popular, and with good reason. For years, smaller phones were the most popular choice. However, manufacturers of smartphones have shifted to devices with larger screens to keep up with consumers' needs and demands. While some of the larger smartphones are bulky and uncomfortable to use, they are often sold for a much lower price. However, the versatility of the smaller phone still offers more room for functions that are not available on the larger counterparts. Most smartphones have these apps pre-loaded. The only apps that are provided by default are the dialer, music and video apps. However, Android has many other apps available. These apps are helpful for users who need access to the Android Google Play Store, or use a Samsung app store. The Android operating system is an open source system. However, Google, the maker of the Android, has taken steps to keep Android
