=================================== Lightning Bolt Screensaver is a screensaver designed to enable you to enjoy the relaxing sound of rain and the fantastic lightning. Give your screen a fresh new look with this amazing screensaver. If you're bored with your old screensaver, try this one and see what it can do for you. This screensaver includes 19 in-game preset images to customize it to your liking. You can change the music to rain, ocean, thunder, wind, and breathe in breath sounds. When there is rain in the sky, the water drops make a realistic noise, and the lightning makes the most realistic light show on the screen. You can also customize your screensaver with up to 3 different lightning bolt effects, and there are 9 different color effects. You can get the most realistic lightning bolt effects by moving your mouse around in the rain on the right side of your screen. Also, you can change the lightning effects by clicking on the settings button. The slower the movement, the more realistic the lightning bolt effect will appear. You can also add your favorite movie, music, images, or even your desktop wallpaper to the screensaver. The screensaver also includes a wind effect sound that will blow the rain on the screen. It's the most realistic rain effects on the screensaver market. What's New in the?

Lightning Bolt is a wonderful screensaver that uses the rain sound to enhance the experience, allowing you to enjoy the realistic and satisfying sound of lightning in the background of your PC screen. Rain can be either gentle or strong depending on your choice of preset, and the base can be adjusted using the special 'Easy' mode. To create an unforgettable experience, you can set up the 'scream' mode for a sound that will take your breath away. Lightning Bolt Screensaver is a must-have screensaver for those who want to experience the stimulating sensation of a strong thunderstorm in their computer. The interesting animation effects of lightning enable you to make the most of this fantastic screensaver in all respects. Our

Q: MPMoviePlayerController - show fullscreen view on selected item on Navigation Item I've already read and seen several questions on this topic but I can't find a solution to my problem. It's probably my lack of understanding of the navigation controller, but I'm trying to apply this to my app and it isn't working. I've set up a Navigation Controller within which is another navigation controller. The second navigation controller has a UITableViewController on it, I want to show a movie player when I select an item from the UITableView but when I select an item it opens my application instead of the movie player. I've created the movie player in the app delegate, initialised it and set up the URI path using the URLWithString and then I set up the movie player and load my movie. If I'm not mistaken this is when it switches to fullscreen, but regardless the movie player isn't shown on my application. I don't know if my logic is solid enough. If there's any doubts on that please don't hesitate to ask. - (void)tableView:(UITableView *)tableView didSelectRowAtIndexPath:(NSIndexPath *)indexPath {
