Q: AWS CloudWatch gives error with firefox I've created CloudWatch rule which is triggered on creating a new document: event type: CloudWatchEvent event source: SNS event target: CloudWatch Event target type: Custom::EventTarget event detail type: HTTP Request It works fine with Chrome and IE.

However, when I add FireFox to my development machine, in firefox I have an error:
AWS.DynamoDB.Exceptions.InternalError: The HTTP status code is not found in the AWS::CloudWatch::Rule::HTTP-Request HTTP header.

Internet Explorer 11 crashes when run on Windows 10 after login Unable to open website - Microsoft store Symptoms: Windows is installed but is not logging on to the Internet. It keeps restarting the internet without creating a log on windows 10. There is no 'on-screen' message and the computer does not post any error messages. How to fix: Fix It - Windows - Reset/clean installing - Resetting your Windows Fix It - Windows - Reinstall (optional) Fix It - Windows - Hard Drive Repair or Check Q:

How can I find the number of rows with 0 values, for a given date range, stored in multiple rows? I have a dataset of New Hampshire's turnpike overpasses. I want to find the number of overpasses (rows) that have a zero value for their weight limit, given the data range of their construction year (START_YR and END_YR) in the first table. I need this output in order to see how many overpasses in the data range had zero value, for a given year. A: You can find the number of zeros in one place by summing over year. num_zero = sum(pd.Series(df1.Weight_Limit.values).eq(0)) To see how many zero's there are per year, you can then do a group by. df1.groupby(['year'])['num_zero'].sum() or df1.groupby(['year'])['num_zero'].nunique()

Primary Care Completion and Perceived Value of Implementation Strategies by Older Adults: A Qualitative Study. Despite evidence that increases in community-based primary care are associated with reductions in hospitalization and Emergency Department (ED)

visits, widespread implementation of community-based primary care has been difficult. This qualitative study explored older adults' perspectives about completing primary care and their experience with implementing three implementation strategies: financial incentives, modifications to primary care delivery, and performance-based pay. In-depth semistructured interviews were conducted with primary care patients in five clinics in the United States. Interviews explored patient's motivations and experiences with scheduling an appointment for primary care, discussing care goals, receiving care coordination, and the impact of an electronic medical record on their care. Participants were older adults 91bb86ccfa
