For CPU16, CPU32 and CPU64, supports Reverse Instruction Lists (RIL) and Linker with Thread Stack. Can add resources easily into code. Interrupt, not supported CPU. Tiny, it's only about 10Kb Include a GUI for debug mode (CPU16, CPU32 and CPU64). Works on Window OS from Windows 95/98/ME to Windows XP/Vista/7. Create object file with custom option. Create object file with double clicks in original directory. This app is for Windows. Z80 Byte Code (Z80 BC) is a software that can be used to create, view, edit and execute assembler files for the Z80 processor. It includes an assembler, disassembler and debugger. There are many things that can be done with this software. Create one of the Z80 assembler programs for example, and you can use the debugger to run the program on a Z80 processor connected to a PC. The results can be viewed with the output window. ASMz80 was built from scratch with just 32kb of memory, when it comes to size this is as small as most can get. Yet most of the code is from MARS-Z80 which is a complete disassembler, but that is not what ASMz80 is about. It's really meant to be a lightweight, quick and easy to use assembler. ASMz80 features: Full support for Z80 REP, JP/PC/NP/XN/HL/LS instructions All required assembler instructions are provided (except for some specific features you can use aswell, e.g. the 80200). A license can be purchased to support all of this! ASMz80 can be used directly with an emulator of your choice, e.g. Z80a, RetroMAME or z80vm. The mystery of why it rains when it's sunny can be solved! A new study reveals that sunlight containing more blue wavelengths can be absorbed more quickly by the atmosphere than less blue wavelengths, which causes the faster moisture transport. This may be an example of the blue sky effect on rain, a phenomenon that can be explained by weather models - but this may also serve as an early warning for abnormal weather in the future. The effect of the blue sky explains the relationship between sunlight and rainfall. On Earth, the amount of rainfall in rainwater drops depends on the amount of sunlight hitting the Earth, the temperature of the Earth, the wind velocity and the cloud altitude. The more sunlight hits the surface, the lower the humidity in the air will be. Eli Lieb and Yury Yankovsky from the University of Michigan explain that sunlight is absorbed by the atmosphere, moisture and cloud cover. While the Earth is getting warmer, more cloud cover is formed. If the sunlight is more blue light than green or red, then it will be absorbed more quickly when entering the atmosphere. More light absorbing moisture is more rapidly transported through the atmosphere to the clouds and the precipitation. Therefore, during periods of sunlight, the atmosphere is dry and rain will be delayed - making the atmosphere's moisture content higher. However, even though the atmosphere is dry and sunny with a cloudy sky, if the sunlight is mainly blue, the atmosphere will absorb the blue light faster than red and green light, so the moisture will not be transported by the atmosphere to the clouds. Then the air will be moistened and the rain

Pleural thrombosis following lung cancer surgery. The purpose of this study was to investigate the frequency, clinical findings, and outcome of pleural thrombosis (PT) following lung cancer surgery. Two hundred eight patients who underwent lung cancer surgery and were admitted to the thoracic intensive care unit between May 1994 and May 2000 were included in this retrospective study. Early and late PT was defined as pleural thrombus formation within 48 and 96 hr after lung cancer surgery, respectively. Five (2.4%) patients developed PT following lung
