In the Kingdoms Between, thousands of years ago, the Galbatorix and Urû'ru, both of whom are shape-shifting beings, are in conflict as they each try to control the fate of the world. As the result of this conflict, a rift arises, dividing the world into islands called the Lands Between. Numerous battles and conflicts have raged there over the years, the most prominent being the one between the two dragons Nargen Rheisheer and the Bloody Dragon. Humans with magic powers have journeyed from the Western Lands Beyond, the Eastern Lands Beyond, and the Southern Lands Beyond to the Lands Between. Several of those humans have come to possess the Urulukku, a mysterious magic power known to only a few, one of whom is the protagonist. The protagonist is an important character in the story of The Elder Scrolls: Legends. Using his or her acquired powers and the mysterious Urulukku, they will stand up against the corrupted dragons Nargen Rheisheer and the Bloody Dragon. Then, they will attempt to defeat the three dragons who have formed an alliance, and close the rift between the Lands Between. THE EPIC PREMIUM FANTASY ACTION RPG. REVIEWS ELDEN RING game: Posted by Gruth on 10/19/2017 at 03:46:46 PM I spent some time going through all of your posts, giving you positive comments and accepting your criticism. You still don't have any of your replies in this thread. That's fine. It's only polite to respond to criticism, but I'll stop waiting around for a bit. Thanks for participating. I look forward to seeing what you create next. Posted by Gruth on 10/19/2017 at 03:46:47 PM I'll keep trying, but I'm not surprised by how little time it takes for you to respond to any criticism. So, if you'll forgive me, I won't be around for too long. A lot of people have pointed out that your default UI is a nightmare to use. I'm quite familiar with the UI, having spent hours on end playing it, and I'm doing it for the first time in the bff6bb2d33

I have attached only one ActorContext to my actors. Each context is a singleton. Currently, before I started taking performance into account, my application starts consuming 147.59GB of RAM. However, after I started to put in my effort and make sure that the actors are using the minimum amount of memory, the memory looks good: Summary of JVMs running (for 22 ms): Some of the actors seem not to use any memory: If this is the case, then does the actor's memory usage equally distribute across all the instances? A: According to the Akka documentation, an ActorContext consumes about 264k bytes of RAM. The old version was that context.childrenConsumers would internally store the subscribers, but the new version allows you to use context.childAt(index).subscriber, which should be more efficient. So I'd expect each Context to take up about 50MB. Also, remember that each context starts as a new process, so don't worry about that until you've exhausted the CPU. Also, they appear to use separate instances of Redis and Postgres, so that alone might cause some memory issues. Also, the statistics you linked could just be the garbage collector stats (assuming that's what they are). If you have 15 actors with a total of 3000 child contexts, that will
