It has been listed as a word of the year on Time magazine's "Words of the Year" list for 2010 and 2012. The award was in recognition of the word "Photoshop" being the most popular word of the year, although "Instagram" was the winner of the 2012 list.[5] History Elements 1.0 The first version of Photoshop Elements was released by Adobe on October 10, 2005. It had some limitations, but was generally accepted as a beta version of the professional version of Photoshop, to which it was similar in many ways. Some notable features were a limited version of Photoshop's signature Effects feature,[6] a non-destructive layer-based image editing approach, and limited RAW and JPEG image manipulation features. It also lacked some features of the professional version, such as a 32-bit editable file format.[7] Elements 1.0 was released just a few weeks before the debut of its first predecessor: Adobe Photoshop 6.1, which was released September 15, 2005, and ushered in a new era of products from Photoshop.[8] Elements 2.0 Adobe released a preview version of Photoshop Elements 2.0 on June 17, 2006, available for download from Adobe's website. It provided some advanced editing features such as layer management.[9] The release was pushed back to September 1, 2006. On December 13, 2006, Adobe released Photoshop Elements 2.0. It brought many features from the professionals, such as the Camera Raw filter, Adobe's set of 100 filters, patterns and textures, layers, and powerful adjustments.[10] Among the features included in Elements 2.0 were: Image adjustments that alter the color balance, sharpness, contrast, and other attributes of your images. A non-destructive editing tool that enables you to manipulate one part of your image without changing other parts. The ability to directly edit RAW files from your digital camera. Support for file-based lens correction, such as enabling the lens distortion tool to correct a lens distortion error in your photos without having to crop or recompose the photo before you do the correction. A fast and responsive interface that supports multiple displays and multiple work areas. The ability to create custom menu items on the main menu bar or on floating toolbars that can be added to any image. The option to open and save files in the JPEG format. 05a79cecff

Tasting Matron: "Ya gotta have some liquid." Probably the most enterprising of all the poison business -- and notorious for making counterfeiters rich -- is the whiskey, which is a narcotic more powerful than opium. When a German importer began selling whisky to the Spanish Government, and the American Government became suspicious that English whisky was being passed off as American, Congress passed a law to prohibit smuggling of intoxicants into the United States. Fortunately for smugglers, whiskey is more easily "passed" than wine or brandy. A genuine bourbon, with all the proof it warrants, looks just like an American whiskey. But in other cases the whisky may have been very good whiskey, but so far gone through redistillation that it had lost all the characteristics of genuine bourbon. This may or may not have been distilled with pure charred oak, using only the best charred peat-oak barrels, and producing just enough alcohol to disguise the adulteration. Many celebrated whiskey merchants, recognizing the possibilities of the market, have made an art of adulteration. The earlier we are in whiskey drinking and the poorer we are, the more a whiskey is used, the more we have to pay for it, and the less it can be had for, and the more it is demanded. Drunkenness is a spending disease. The most notorious and widespread variety of poison is the methanol, which, when present in whiskey or medicines is colorless, odorless, tasteless, and indistinguishable from a harmless beverage or medicine. And since it is an alcohol, when properly used, it is a more satisfactory and safe stimulant than any available, unless you have been exposed to, or injected, with strychnine. No one can overdose on methanol, but one can on strychnine. Its amount of force, in fatal doses, is not stated, but \$30,000 was paid out on a charge of murder in New York on the basis of a statement that a bottle of whiskey contained 0.38% of methanol. The proof of this rumour was that the victim had tried to take the bottle from his wife, and had been cut on the side of the wrist by a broken glass. The bottle of whiskey was admitted to be a cheap counterfeit, but the methanol was not. Since whiskey is the most popular intoxicant, because of the world's poverty, and the cheapest, the victim is probably the poor and, in addition

### What's New in the?

The National Highway Traffic Safety Administration (NHTSA) is usually pretty busy with keeping our roads safe and promoting the safe use of our vehicles. These days, the agency is also doing a ton of damage control regarding the VW diesel scandal. Back in September, VW admitted that it had been using software to cheat diesel emissions tests. Eventually, this came to light in the United States and, just like that, the company was facing a huge amount of trouble. Not only did VW's German competitors raise a big stink, so did the US government. Now the time for VW to cough up a huge fine has come and gone. The company didn't exactly surprise us with the amount it paid. We expect the fine to be about \$18 billion. This is less than some of the estimates we've seen, but it isn't bad either. The company has only paid about \$4 billion so far. We're pleased to see that VW has been fined for its actions. Hopefully this will open the floodgates and we'll see similar fines down the road. After all, we have several other manufacturers to look out for. The fine is interesting because of the way it's structured. The money is given to the Environmental Justice Program which provides help for the auto industry and the communities around it. So there's a good side to this story as well. Hopefully this will make others think twice before trying to outsmart the government. Cheating with a calendar, calculating travel times What most people don't realize is that there's a lot more to a simple trip than just the list of days and times in a calendar. As an example: Suppose you're traveling from Chicago to Tampa. Tampa is on the East Coast, Chicago is on the West Coast. You have to fly east and back, plus an arbitrary amount of time between. If your travel time is 15 hours, it adds up to 75 hours. Add the cost of flying and the cost of airfare, and you know you have a lot of time to squeeze in all of your other activities. Read More 2.8 million domestic passengers have used Roadtrippers since we launched our web site almost seven years ago. You'll find countless stories like Jack's where travelers used our site to find alternate routes. Our goal is to take the uncertainty out of travel planning by making
