A: IF you have the DVD version of Autodesk, print out or write the.inf file onto a piece of paper, and then fire up disk copy-protect software like "XP-Unlocker" (put it on the Windows boot CD) and boot up the CD on your computer. For example, I have a table with two fields, itemid and phone. itemid is the primary key and phone is an integer, called for every item. How can I get a list of all items where phone = toto (toto would be the value I want). I see a lot of SQL syntax, but I can't make any progress with it. I don't know how to match the row to the column value, and then get the list. thanks, A: I don't think you can get it using select. You can create an SQLiteCommand that has a single parameter. Use ExecuteScalar to obtain the object. SQLiteCommand command = new SQLiteCommand("SELECT * FROM table WHERE phone =?", connection); command.Parameters.Add(new SQLiteParameter("@id", toto)); object value = command.ExecuteScalar(); Of course, it would be better to have a column phone and not a column called phone. It's a good way to see a complete listing of installed extensions, as well as the folders they appear in. If you're looking for new features, you can click on the three dots at the top of the address bar, then click on the "More tools" option. This will open another small drawer, which lets you change the size of the text, add new buttons, and toggle the dark/light theme. The Chrome developer tools are built into the browser itself. Navigate to "More tools" then "Developer tools" to get started. The developer tools are mostly helpful for getting a deeper level of control over individual browsers. You can view which files are loaded on a page, or even use new Web standards that allow you to modify the code directly. You'll see the developer tools in action on the next page.
