
'LINK' Download Asus Thermal Radar 2 43

we needed to work on the aesthetic side of things some to make sure it fits with your motherboard rather than just being on the right side of the motherboard. we've added some coverings to make it look a little more stately (especially if you've already got the cooler on and a motherboard cover), but in a bare minimum you should be able to remove the cover to make it look like this. there's a little painted white circle on the front of the cover to make sure that there is no piece of the cover protruding from the front. the only thing you may need to be aware of are the screws that are used to hold the cover on, but they're easy enough to remove with some pliers and a bit of force. asus new sabertooth series has own design with new nine-blade turbine fan. this unique design can deliver extreme cooling performance without increasing the fan noise. the new zero-frame fan can reduce the interference to other components, so you can enjoy both noise-free performance and excellent cooling capability at the same time. as is quite clear from the pictures above and below, the installation is a fairly straightforward affair and you'll be able to get it setup in as little as 5 minutes or so. the fact that there are four screws holding the unit to the motherboard means it could be a little awkward for some people, so i'd advise looking at the installation instructions and be ready to follow them. what's great is that they come with a template of what you want to do, so it's easy to get it right. there's a problem with the pcb design of a number of board manufactures that you may (or may not be) familiar with. with motherboard makers like asus using "shielding" pcbs that prevent shorter signals going through the cpu socket itself, the cpu socket (in this case the "connector" is actually the socket itself) has a tendency to have a lot of noise that seems to come from the socket itself. as such, i don't think i've seen the extra information on the motherboard like asus have done here. it's not something that's really noticable when using the motherboard, but it does help us all know what's going on under the hood.

further up we see the four pci-e x16 connectors and the second sata3 connector.

the socket area also features an 8-pin power connector for the cpu, 12-phase digi+ vrm and a 6-pin power connector for the graphics card. the underside of the board shows a look at the pcie x16 slot used for graphics cards and where the i/o panel is installed. the pcb comes in at a slender 5.15" (133.5mm) for a small form factor all-in-one build, showing the performance-oriented nature of the

board. the tuf2 thermal radar ii comes with an aluminum heatsink with eight heatpipes and hybrid coolant technology. the heatpipes run from the mosfet and vrm to the memory on the pcb and the fins are large-area and optimized, increasing airflow by 10x in comparison to standard motherboards. fans and tubing are also more efficient thanks to the cooling-giant's 2.5d technology. there are 10 dram slots along with the pci-e and two pci-e 3.0 x1 slots for those who want to overclock. both of these are occupied by the crossfire/sli-ready intel x99 chipset with

intel® optane™ memory support. one pci-e slot is occupied by the wifi 802.11ac/a/b/g/n/ac 2x2 wireless card, the other one by the intel ac 8260 gigabit lan controller, one of the three lan ports plus the 802.3at poe/thunderbolt 2 port. the other two usb 3.1 ports are located on the back panel on the back-panel headers. the two audio jacks are located on the side of the board, as well as the firewire port. there are four ddr4 dimm slots along with two ddr4 atx power connectors. the four ddr4 dimm slots (two per channel) are compatible with ddr4-2666, ddr4-2600,

ddr4-2400, ddr3-1866,
ddr3-1600, ddr3-1333,
ddr3-1066 and ddr3-800
mhz memory. users can also
install two sodimm memory
modules in each channel (up
to 32gb), and also multiple
2gb, 4gb and 8gb modules
in each channel. 5ec8ef588b
