The part I'm not sure of is the last part of the attack, the final part. Does the browser collect elements that belong together and then put them into one big block on the heap or does it store each as a separate element? Wouldn't it be better to store multiple elements in one element? A: The browser doesn't maintain a collection of objects that belong together, rather it generates a JavaScript string containing object properties that the user has added to the DOM tree. When an object is added to a document, its properties are added to an array of strings, and each string will indicate which object it is, along with the property name. This is the string that would be run through the eval() function to execute the JavaScript string that the user has written in their JavaScript. For example, if an object with the ID "A" was added to the DOM tree: var A = document.createElement("div"); A.id = "A"; document.body.appendChild(A); the following string would be generated: // Let object a be the object we are trying to get. var a = document.getElementById("A"); var str = "document.getElementById('A')"; Then a new object is constructed with the following properties: Object.prototype.toString.call(a) = "[object Object]"; Object.prototype.toString.call(str) = "[object String]"; if we assign str to a, we get this result: A.toString() = "[object Object]" It's important to note that if you try to use the escape property, the

Markup Assistant: Increase your drawing efficiency, even without AutoCAD experience. A new template-based user interface automatically detects and opens the correct paper or PDF files, and introduces you to drawing conventions and symbols. (video: 1:30 min.) Copy and Paste: Perform a fast, easy copy and paste that can be customized to your own drawing preferences. New powerful selection types, including rectangle selection, drag selection, and marquee selection, speed up copying, and when you're ready, paste using the draw object context, the command line, or the copy button. (video: 2:00 min.) Printing Enhancements: Easily print from web and mobile web sites and applications. Easily print to paper and to PDFs. Enable your users to turn off the display and interact with the drawing directly. (video: 1:08 min.) Table Tools Enhancements: Advanced table selection. Control the order in which table cells are selected and deselected. Give your users the power to independently select and deselect table cells. (video: 1:26 min.) Exporting: Save a drawing with context. Export drawings to various formats, including DXF, DWG, DGN, SVG, and HTML5. (video: 1:25 min.) Snap to Grid: Save time with the new grid snapping options. Drag a point to the grid and it snaps to the nearest gridline or marker, helping to ensure more accurate snap settings. And when you're ready, you can also lock a snap setting so that it will always be the same. (video: 1:30 min.) And Much More: More command line options. New colors and symbols. Improved navigation for the ribbon. A redesigned scale. And many more. Scaling: Improved. Customization Assistive features: Improved. Keyboard: The software learns your keystrokes and makes them easier to use. And now you can share your own keyboard shortcuts. Improved Labels: Compose labels with built-in help.
