Get the latest version of Caller ID & Block (Premium) released on.The regulatory function of the mast cell in allergic inflammation. Mast cells are essential effector cells in allergic and inflammatory disorders. The cytokines and chemokines produced by mast cells are important modulators of allergic reactions. This review highlights the role of mast cells in the pathogenesis of allergic and inflammatory diseases and discusses their potential as therapeutic targets. Mast cells express and are activated by inflammatory cytokines and produce a wide range of inflammatory mediators. They also have a role in the pathogenesis of allergy, asthma and chronic obstructive pulmonary disease. The mast cell has been implicated in the pathogenesis of these diseases and has potential as a therapeutic target. Agents that inhibit or interfere with mast cell activation, recruitment and function may be effective as therapeutic agents in the management of allergic and inflammatory disorders.Q: Is there a way to use nested hash in Ruby I have the following hash: `{:a => {:b => {:c => {:x => 1}}}}` } Is there a way to get it to output as such: `{:a => {:b => {:c => {:x => 1}}}}` I'm aware of the following ways of doing so: `[:a, :b, :c, :x].inject({}) do |result, (key, value)| result[key] = value result end` `{:a => {:b => {:c => {:x => 1}}}}` But, it doesn't give me a nested hash. A: You can do this with the `Hash#merge` method. Here's `f988f36e3a`
