Buying the dip is not a simple trading strategy and should be approached cautiously. Done right, you can earn a fat discount on stocks with sound fundamentals and strong prospects. Think of it like buying quality stocks at a discount. The truth is that many great companies get dinged in short-term market drops but tend to perform very well over time. When you know which metrics of quality to track to uncover cheap stocks to buy, you can pick winners that the market may reward with higher prices after the dip. We have identified nine cheap stocks to buy that have fallen along with the S&P 500 over the last year and have yet to recover. Each company has a multiyear history of growing earnings per share (EPS) and revenue, and analysts are still expecting similar growth in the years ahead. **Please note that the stocks above were selected by an experienced financial analyst, but they may not be right for your portfolio. Before you decide to purchase any of these stocks, do plenty of research to ensure they are aligned with your financial goals and risk tolerance.** Cory has been a professional trader since 2005, and holds a Chartered Market Technician (CMT) designation. He has been widely published,

writing for Technical Analysis of Stock & Commodities magazine, Investopedia, Benzinga, and others. He runs TradeThatSwing.com, has authored several trading courses and books, coaches individual clients, and regularly trades stocks, currencies, and ETFs. But with the S&P 500 Index suffering its biggest annual loss since 2008 last year, many investors have seen their portfolios decline in value. And one opportunity that comes from a less favorable environment on Wall Street is the presence of more cheap stocks. If you are interested in cheap stocks, it's vital to do your research beyond just looking at the latest print for prices. You need to take a hard look at risk metrics, recent performance and future outlook in order to invest responsibly. **With that in mind, here are nine cheap stocks under \$10 to consider.** The following picks all have something to offer: Some are stable low-priced stocks with healthy dividends, while others are tech companies with growth potential in a digital age. And some are simply bargains after recent declines. That's in part because the company turned around from a 25 cents per share loss in fiscal 2021 to a 24 cents per share profit in fiscal 2022. Furthermore, ADT's full-year report showed annual revenue growth of 21%, as well as a fourth consecutive quarter of record-high customer retention and recurring monthly revenue balances. This fundamental strength is why ADT is on this list of the best cheap stocks to buy now. Semiconductor stocks took it on the chin a few years back amid supply-chain disruptions. Headwinds remain after a 2022 U.S. Department of Commerce ruling restricted exports to China and could spark a long-term trade war on chips. However, it's important to understand that recent troubles are coming after significant long-term growth for the semiconductor industry. It's a lower-margin business, but that means ASE doesn't have to sweat the research side or the marketing of patented semiconductors and therefore offers more stability. Many of the cheap stocks out there in the tech sector can be risky, so ASE's unique business model makes it stand out. In fact, the dividend is a hefty 9.9% based on its 15 cents per share quarterly payout and current pricing. Even if shares continue to move sideways, that big-time payday could make Equitrans one of the best cheap stocks for income investors to consider. The icing on the cake for one of Wall Street's best cheap stocks is a 17 cents per share quarterly dividend that is only about 60% of total profits, but adds up to a generous annualized yield of 8.7%. This is more than five times the current

S&P 500 yield. You may think a cheap stock like NL Industries, tied to cyclical manufacturing trends and with a modest market cap of just \$315 million in market value, might be a risky bet right now. However, shares are down about 4% in the last 12 months, compared with a nearly 10% loss for the S&P 500 in the same period. It's also up about 130% in the last 36 months, more than doubling the return for the broad market. Shares of PAYO stock are up more than 40% in the last year thanks in part to its growing business. There's assuredly risk here if we hit a widespread downturn in global spending, and thus reduced transaction volume. But PAYO, one of Wall Street's best cheap stocks to buy, could have a very bright future in a digital age. In 2022, it hired former Alibaba.com (BABA (opens in new tab)) executive John Caplan as its CEO, and it is looking to expand even further in the years ahead. In November, Payoneer reported strong growth of 30% on a year-over-year basis. And at the end of February, it hit the same mark as it reported record fourth-quarter and full-year revenue, generating more than 30% year-over-year growth for both periods. Looking forward, PAYO expects growth to continue in the 25% to 30% range, which bodes well for investors in this cheap stock. In an age where market participants are looking for investments that are hedges against inflation or low-risk alternatives to the typical tech stocks of yesteryear, there's a lot to be said about a miner like Yamana. The company's most recent reserves report shows more than 380 million metric tonnes of gold and more than 330 million tonnes of silver. As AUJ brings those goods to market, it will cash in. And considering the massive reserves it owns underground, there's little risk of this top gold stock going under anytime soon. As proof, shares are up roughly flat over the last year while the S&P 500 has lost about 10% or so in the same period. Yamana pays a healthy 2.3% dividend yield on top of that to provide a decent stream of income along with an inflation hedge via one of Wall Street's best cheap stocks. Identifying the best cheap stocks can be far more challenging than searching for low-price stocks. Stocks with low share prices are usually inexpensive for a good reason. As a general rule of thumb, stocks of low-quality companies often stay cheap over the long haul. Inflation and elevated interest rates create a difficult environment for certain stocks, including growth stocks and technology stocks. The bond market is currently pricing in at least another 25 basis point interest rate hike by the

Federal Reserve, and the Fed is unlikely to pivot to rate cuts until at least the end of the year. In the current uncertain economic climate, investors should be defensive yet opportunistic. The stocks selected were from the following four sectors: energy, health care materials, and consumer discretionary. The past year has been a bumpy ride for stocks amid interest rate hikes, with communication services, real estate, and information technology sectors notching double-digit year-over-year losses. In contrast, the highest-performing sector was energy, followed by health care, utilities, and materials. You can buy a relatively large number of shares of cheap stocks with low share prices. Cheap stocks may also have a psychological appeal relative to stocks with high share prices that may appear expensive and seem like they have limited upside. But stocks with cheap share prices are often cheap for valid fundamental reasons, and many cheap stocks continue to underperform long term. With any investment, there is a degree of risk as well as return. When deciding which cheap stocks to buy, here are key factors to keep in mind: P/E ratio, price-to-book value, cash flow and earnings reports. Earnings reports offer a wealth of information on companies, including their profits and losses. They also note whether a company performed as expected for a given period. Digging into past earnings reports can help you anticipate future performance and decide whether cheap dividend stocks are a good buy. Export data to Excel for your own analysis. By performing thorough research and honing an eye for value investing, investors can uncover some amazing opportunities even in this volatile market. These cheap stocks to buy for \$100 could prove long-term winners in the equity market. Its financial planning and incredibly smart decisions make it an attractive option for investors interested in long-term growth and stability. This relatively unknown stock truly stands out among the best cheap stocks to buy for \$100. Small-Cap stocks are

smaller-sized companies with a market capitalization between \$300 million and \$2 billion, offering excellent opportunities for long-term growth. Because they are smaller in size and come with increased volatility and responsibility, they are among the riskiest of U.S. equity asset classes. Small-caps tend to go through high growth periods and typically have higher leverage. Small-cap stocks with a lot of leverage tend to sell off sharply when threatened by rising interest rates. Additionally, small-caps typically sell off more from a day-to-day trading perspective than large-cap stocks when the market begins to enter a slowdown, recession, or contraction. As a result, stocks under \$10 are not an investment for everyone, particularly the risk-averse, given their volatility. However, small-caps have outperformed large-cap stocks over long periods, which is why I wrote a Forbes article on the subject a few years ago. Although past performance is not a guarantee of future results, some of my small-cap picks have paid out handsomely over the last year based on our Quant System. The key is finding companies with the attractive collective financial traits we seek; solid valuation, strong growth, EPS revisions, profitability, and momentum. These essential qualities are currently found in my top 5 stocks under \$10 to buy now.
